Short description:

Low-Poly Yoshi - Dual Extrusion version

Description:

I would love to keep sharing my projects with all the community. If you like my designs and want to support my work, now you can help with a donation. <http://bit.ly/2a7N4Et> --- The dual extrusion Low-Poly Yoshi is designed to show all the possibilities of dual and multi extrusion 3D Printers. Based on the original Low-Poly Retro designs, this model has been completely redesigned and optimized to be printed with two or more extruders. This model is more complex but easier to print, and it keeps all the features from the original design: it doesn't need support material, infill or prime tower. Source files are available, which means you can easily remix this model or export in any other format.

If you can, please use the online documentation found at <http://www.youmagine.com/designs/low-poly-yoshi-dual-extrusion-version> because those may have been updated. Also, there you can interact and provide praise and/or feedback.
